技术规格

Background:	Dendra2 is a photoswitchable (green to red), monomeric fluorescent protein derived from octocoral <i>Dendronephthya</i> sp. The Dendra2 sequence has been optimized for maturation and a bright fluorescence both before and after photoswitching. Its codon usage is optimized for high expression in mammalian cells, but Dendra2 can be expressed in many other systems as well.
Applications:	WB
Name of antibody:	Dendra2
Immunogen:	Dendra2 expressed in HEK293 cells
Full name:	Dendra2
WB Predicted band size:	28 kDa

WB Positive control:	HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY Dendra2 ne) cDNA for 48 hrs and lysed
WB Recommended dilution:	500-2000
